This whole idea is insanity. There is at least 300 years of fossil fuel available at current and projected consumption rates. The transfer from fossil to all electric may be in our future, distant future, but to swallow the CO2 “pollution” myth and cease fossil fuel consumption will only create far greater problems for mankind in years to come. Maybe one day in the not too distant future we may find a reliable way to dispose of spent nuclear waste (rocketing it into the sun) and our “power” needs will be essentially solved first centuries and electric powered motor vehicles may be practical. Until then the safest, cleanest and most reliable source of electric power generation is by utilizing fossil fuels. Until then fossil fueled motor vehicles are an order of magnitude better than electric fueled vehicles that require extended parking time to refuel. Please kill this stupid legislation. Chuck, York.
