Hello

At a time when we can't keep the lights on during a wind storm, we are going all electric?? The last time we were without power for 4 days.

We don't have the ability to produce the power this state needs now, how do we plan do so in the future?

Solar farms are taking up valuable farm land everywhere you look. Wind mills on every hilltop you can see and if you check CMPs website, only a small percentage of our electricity comes from both. maintenance needed to keep these both working is very high.

The largest part of our power comes from natural gas and we want to stop the expansion of resources?

Am I missing anything here?
