We are not California!! Don't pigeon hole us into a place so quickly when electric car technology/ charging technology/ battery technology is not good enough yet. Also there is push back from auto makers because they know that electric vehicles are not the answer! Spend the time and money on better technology that is already in the works like hydrogen cars!! Electric cars are not the answer to our problems!!! Solar and wind power have their own issues!! The waste from spent batteries, spent solar panels and worn out wind mills will be an even bigger ecological disaster than fossil fuels and they aren't even talking about that!!! Let's be smart and not make rash hasty decisions especially now that there is pushback from automakers and you know there are new options that the auto industry is working on.
