The top question that law maker's should be asking is this:

Is there enough lithium and other rare-earth elements to manufacture all the EV's required not just for this State or for this nation but throughout the earth?

Multiple research indicates not even close which means after the EV fad fades due to lack of thorough investigation, there will be yet another technology rammed down our throats.

The second question is this:

Can the State implement all the power charging stations required throughout the State to accommodate re-charging? And who is going to pay for that infrastructure and the costs to charge even a city full of EV's?

Respectfully submitted,

Kerry Lord, 65 Woodward Lane, Blue Hill, ME
