If you want ev's everywhere, best make sure infrastructure is ready. If you say charge at home, I want a special rate for my electricity use. Also everyone would need to upgrade their electrical system to 200 amp service. With the heat pumps, ev's, you're going to have to do some infrastructure changes. Don't forget, Mainers want woods and not "electricity" per se. No nuclear, no coal, no natural gas, no oil. No biomass, no solar, no wind, no tidal, no hydro, on it goes... where is the electricity going to come from and who is going to pay for infrastructure?

Everyone wants electricity, no one wants to talk about details. Let alone, how is someone like me, on a fixed income, going to survive? Remember, I don't get paid like politicians do.
