How do you think Mainers can get by with EV's when the technology isn't even up to par yet? We need to drive because we can't just hop on a bus to get to the grocery store or to our work. When it's winter we can't afford to stay home because our vehicles are dead. We can't afford electricity as it is now because costs have escalated to an almost unsustainable rate! You can't really expect we can all install services at our homes, can you? Keep in mind the closest charging station will be at least 20 minutes away for most of us and more than double that for many.

Get a grip and stop legislating in a fantasy world. Whatever happened to being logical about planning for the future. Electricity is not an answer to our environmental problems.

Sincerely,
Randy Prock
